## Care and Cleaning Guide

SitOnIt • Seating®

The trust you place in us is everything. From design innovation to day-in and day-out durability, we strive to give you solutions you can count on - and peace of mind from knowing our products are safe.

With our collection of protective screens (and by following these care guidelines), you can help define and defend almost any space.

### Cleaning vs. Disinfecting

Cleaning and disinfecting are two distinct actions and knowing the difference between the two can help promote safety in the workplace.

#### CLEANING REMOVES GERMS.

When you eliminate dust, fluids and germs from our acrylic surfaces, they are considered clean. Cleaning incorporates water and detergents. During this process, germs are also removed, reducing exposure. It's important to note that cleaning agents are not designed to kill germs or pathogens. To do this, you must use disinfectants.

#### Cleaning guidelines and tips:

- Start by lightly dusting with a soft, grit-free cloth or chamois (no wiping)
- After dusting, dampen cloth or chamois with a solution of mild, non-abrasive liquid soap and water
- Finally, wipe clean and dry with a soft, grit-free cloth, sponge or chamois
- Avoid using abrasive cleansers and steel wool to prevent scratching
- Test any cleaning method or agent in an inconspicuous area of the surface
- Do not steam clean over 15 PSI

#### DISINFECTING KILLS GERMS.

In order to kill viruses, bacteria, spores, fungi or other harmful microbes, you must disinfect. While using disinfectants may destroy "germs," only cleaning can remove them. The combination of cleaning and disinfecting work together to create safer and more sanitary spaces.

#### Disinfecting guidelines and tips:

- First, ensure that the surface has been properly cleaned
- Next, apply disinfecting agents directly to a soft, grit-free cloth, sponge or chamois
- Initiate disinfecting by wiping the surface with the dampened cloth, ensuring proper disinfectant dwell time (as noted in the product instructions)
- Once finished, remove all disinfecting agents from the surface with water and a soft cloth, then dry
- If not properly removed, disinfectant residue could degrade product life and appearance
- To disinfect using sodium hypochlorite (bleach), usa a solution of five (5) tablespoons or 1/3 cup of bleach per gallon of water, or four (4) teaspoons of bleach per quart of water
- To disinfect using quaternary ammonium and/or hydrogen peroxide, please follow the manufacturer's instructions.

## Safety First

To ensure proper cleaning and/or disinfecting, it's important to consult with facilities or safety personnel and follow the manufacturer's instructions — including detailed dilution requirements, safe application instructions, dwell time for effective disinfecting and more. Safety guidelines also include instructions for:

- Using personal protective equipment (PPE) correctly, e.g. gloves and eyewear
- Eliminating exposure of chemicals to electrical products
- Preventing toxic fumes from mixing chemicals
- Ensuring proper ventilation and application
